PROJECTS

Rentmate
United International University · December 2022 - February 2023
· Designed to simplify the process of finding and renting a house. It allows users to search for available properties based on their desired location, price range, and other preferences.
· The system also includes features such as property listings, real-time availability updates, online payments, and secure communication between renters and landlords.
· Integrated a property management system for the property owners to manage the renters with ease.
· Tools used in making the application: HTML, CSS, TAILWIND, DJANGO, MYSQL, JavaScript, MAP APIs.

Restaurant Management System
United International University · May 2022 - July 2022
· The main feature of the system is the ability for customers to book a table seat and order food from the comfort of their own homes.
· The application includes a reservation system that allows customers to select their desired table and time, and an online ordering system that allows customers to place their food orders and make payments.
· Aims to improve the efficiency of the restaurant and provide a convenient experience for customers.
· Tools used in making the application: HTML, CSS, PHP, MYSQL, JavaScript.
